THE MASSACHUSETTS COLLEGE OF OPTOMETRY

424 Beacon Street, Boston, Massachusetts 02115
617-261-3430

15 April 1973

Dear Applicant:

You are one of sixty-nine students who have been accepted for matriculation in the four year professional degree program this year. Your class comes from 15 states and Canada. Fifty-two of you have earned baccalaureate degrees.

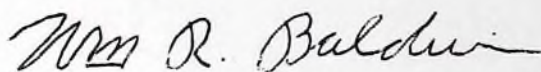

You have been selected from 480 qualified applicants. We are reasonably certain that you have the scholastic qualifications to succeed. A much more difficult assessment is that of motivation and potential for dedication to service to others which is also essential to becoming a good optometrist. Therefore, both the quality of your scholarship and your development of necessary professional attitudes will be evaluated continuously after you begin your studies.

We hope that you will be caught up in the excitement of change and great new opportunities to serve human kind through the application of knowledge exploring in visual science and the expanding scope of optometric service. You will find here easy access to all members of the faculty and administration and to the pursuit of special interest that you develop. You are encouraged to take full advantage of these opportunities.

The choice of a career is one of the major decisions of your life. Now that you have chosen, I urge you to make a strong personal commitment to seeing that your career in optometry is as productive and as lustrous as you are capable of making it. Such commitment means, of course, that you must be a diligent scholar, even when the work seems drab or the effort great. My experience is that the greatest single lament of graduates is that they missed opportunities to learn. We will do our best to create these opportunities and to help you take advantage of them. The rest is up to you!

Best wishes for a happy, productive and rewarding four years ahead.

Sincerely,

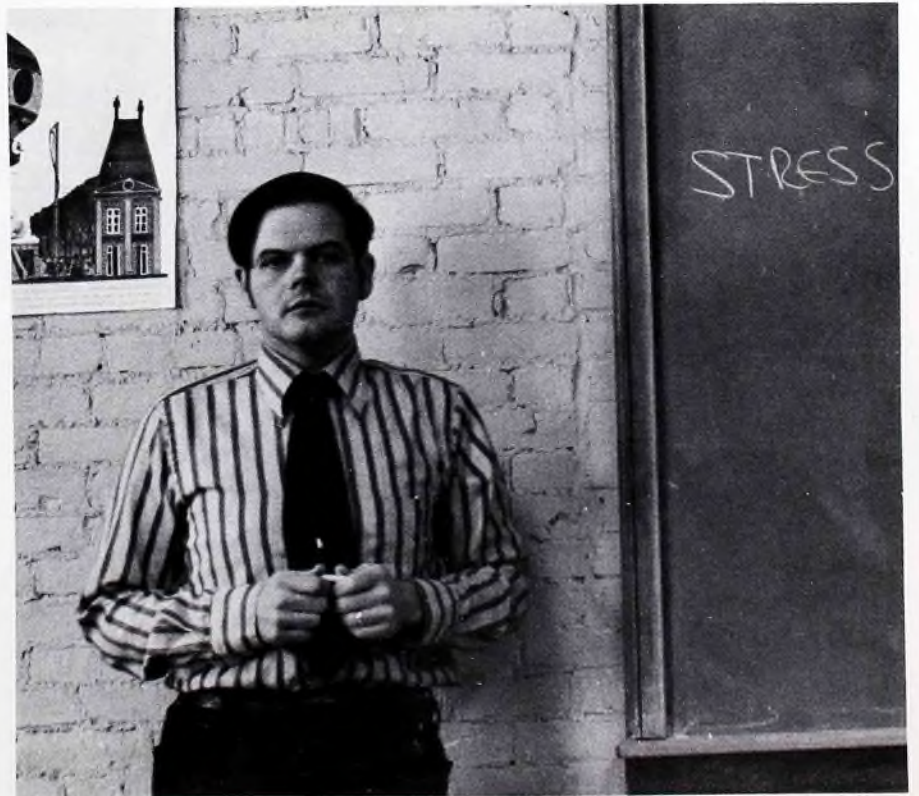

Wm. R. Baldwin
President

The spectacle magnification of a -4.00 DS, made of 1.5 index glass, surfaced with a $+5.00$ D front curve and 1.5 mm center thickness, placed 15 mm in front of the eye's entrance pupil is

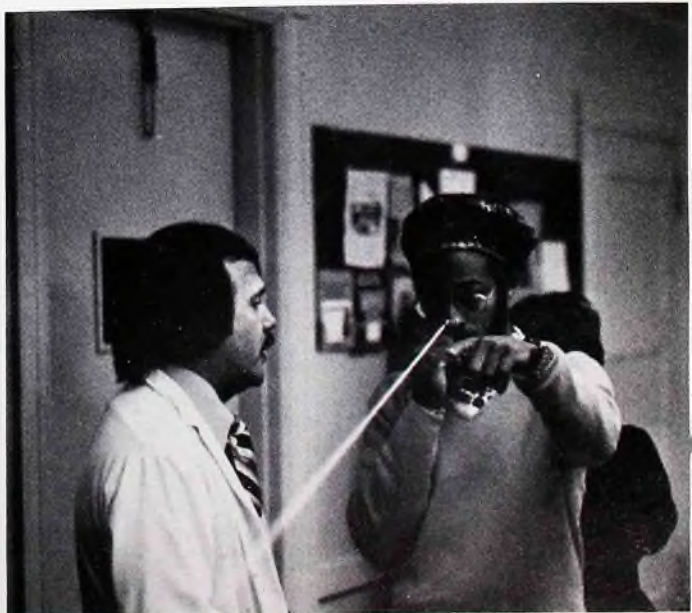

- a. 1.005
- b. 0.943
- c. 0.948
- d. 1.037
- e. None of the above is correct.

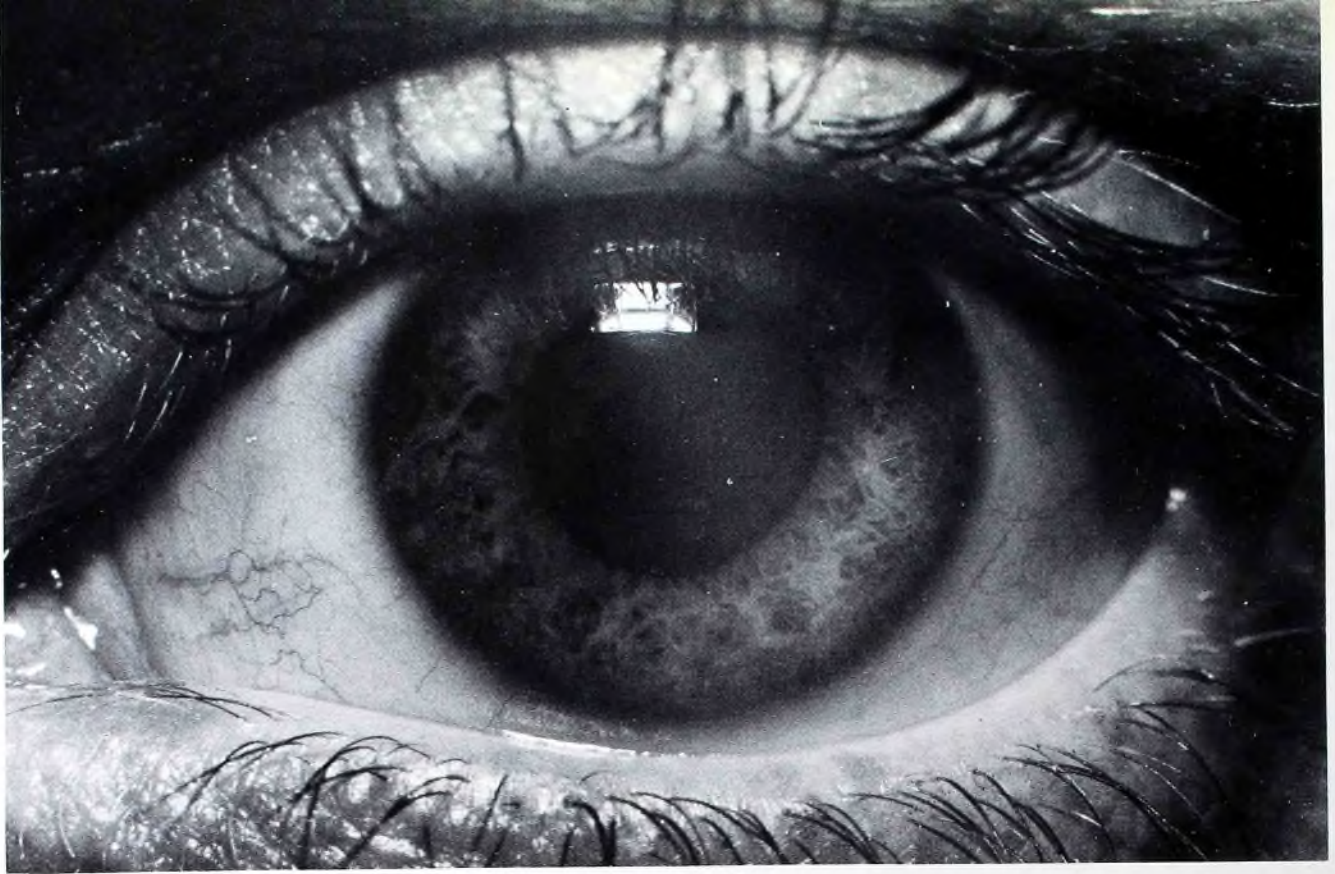

$$MAG_T = \frac{1}{1-D_{\frac{t}{n}}} \times \frac{1}{1-D_v h}$$

Obviously a ... but we could be wrong!

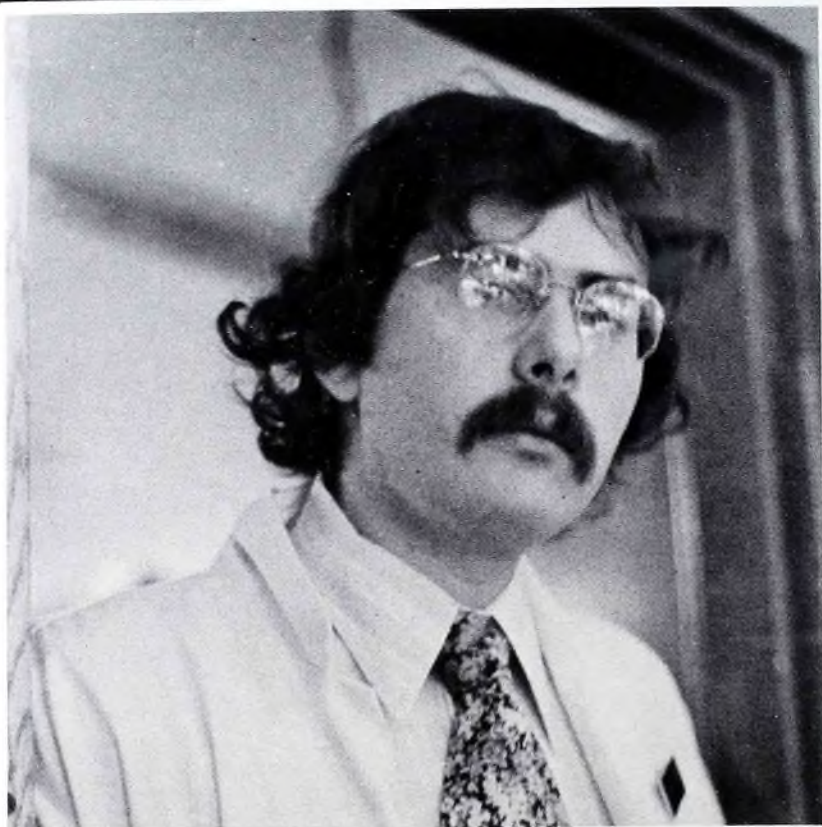

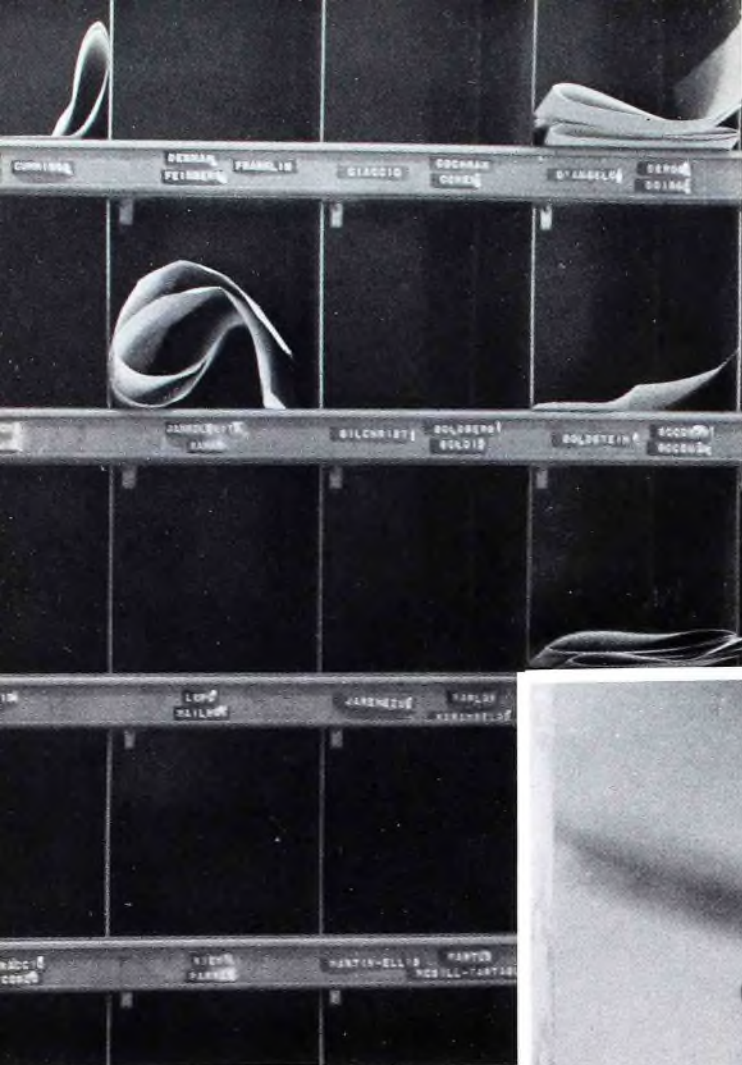

“Why should you be interested in the eye? Because, diagnostically and functionally, it is the most important square inch of the body surface.”
William H. Havener

MEMORANDUM

TO: All Second-Year Clinicians

FROM: Dr. William Dell, Acting Chief of Staff
Division of Clinical Services

DATE: 25 September 1974

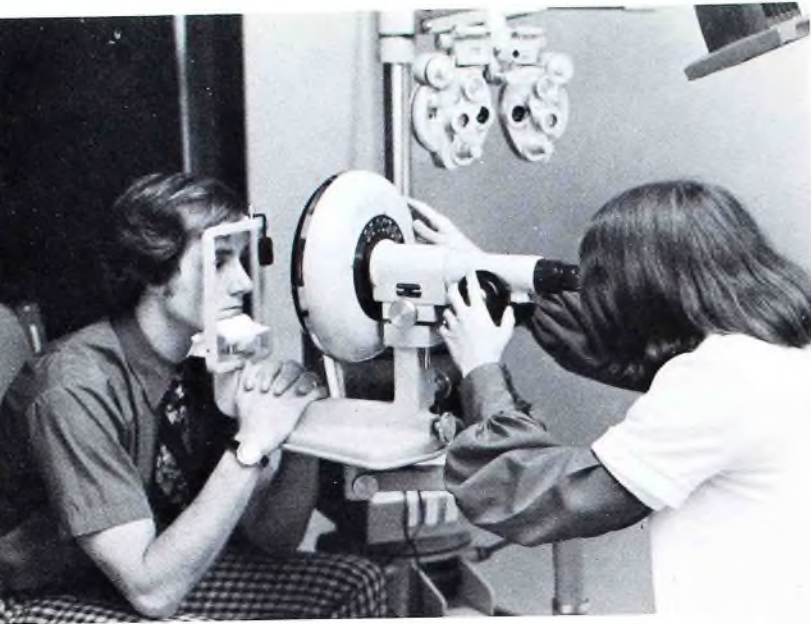

SUBJECT: General Clinic Protocol

1. All second-year clinicians will report to the General Clinic at 9 A.M. SHARP.

2. Have with you the following items:

short white clinic jacket
name badge
diagnostic kit
near point cards - Jaeger notation
penlight
p. d. ruler
occluder
red glass
Maddox rod
extra batteries and bulbs
clipboard
pen

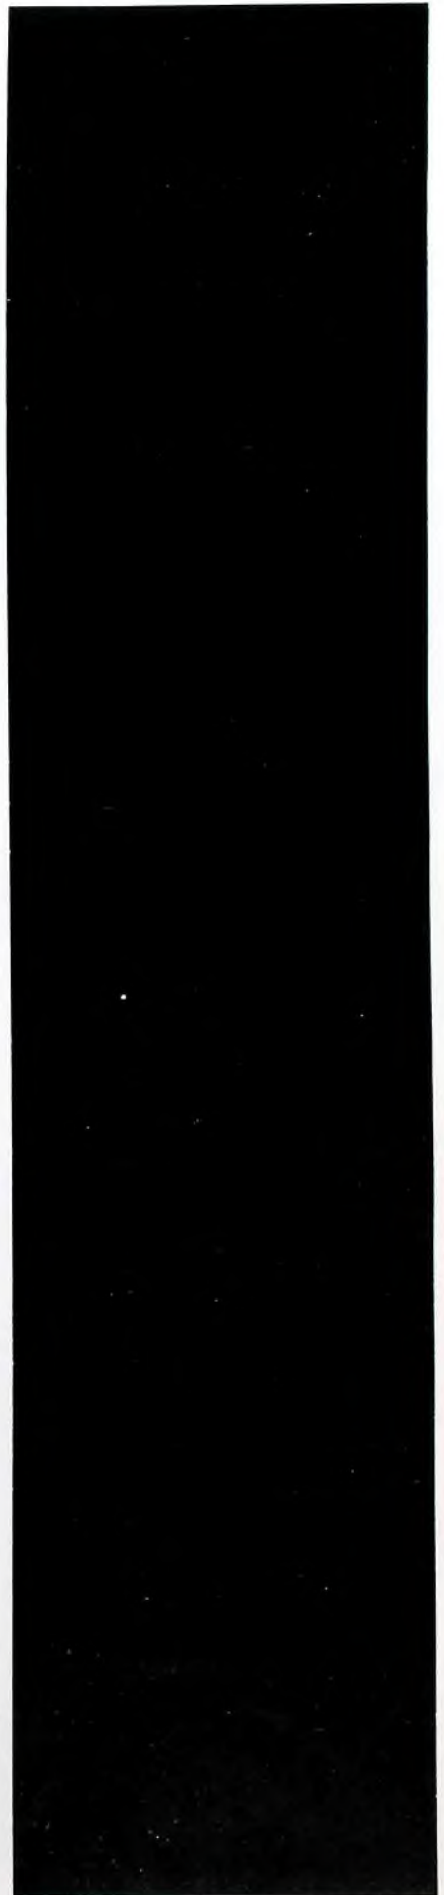

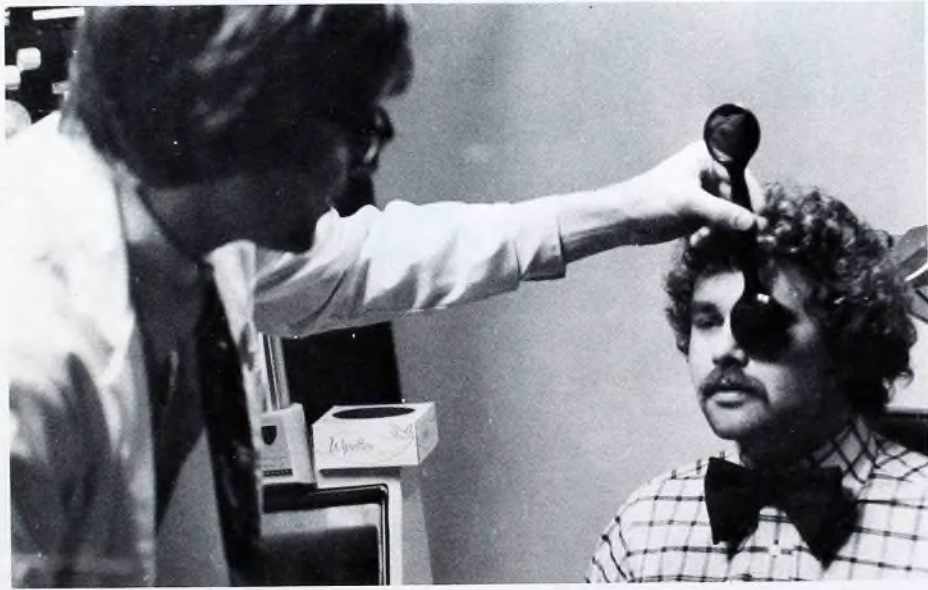

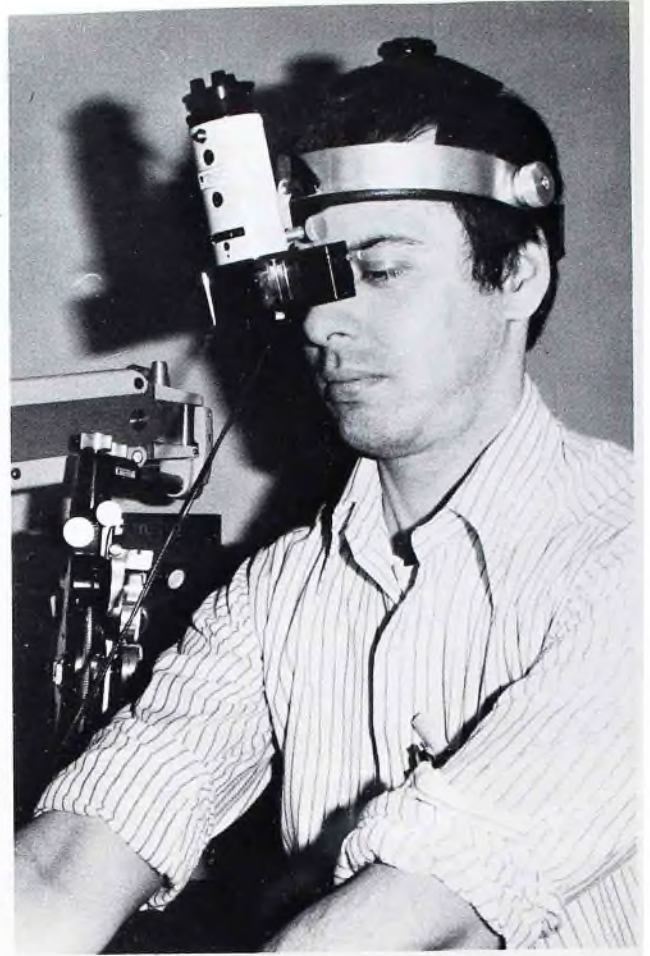

"All clinicians not involved directly in patient care, should use their time in perfecting their clinical skills."*

*i.e. if there are no patients to play with, play with each other ... "

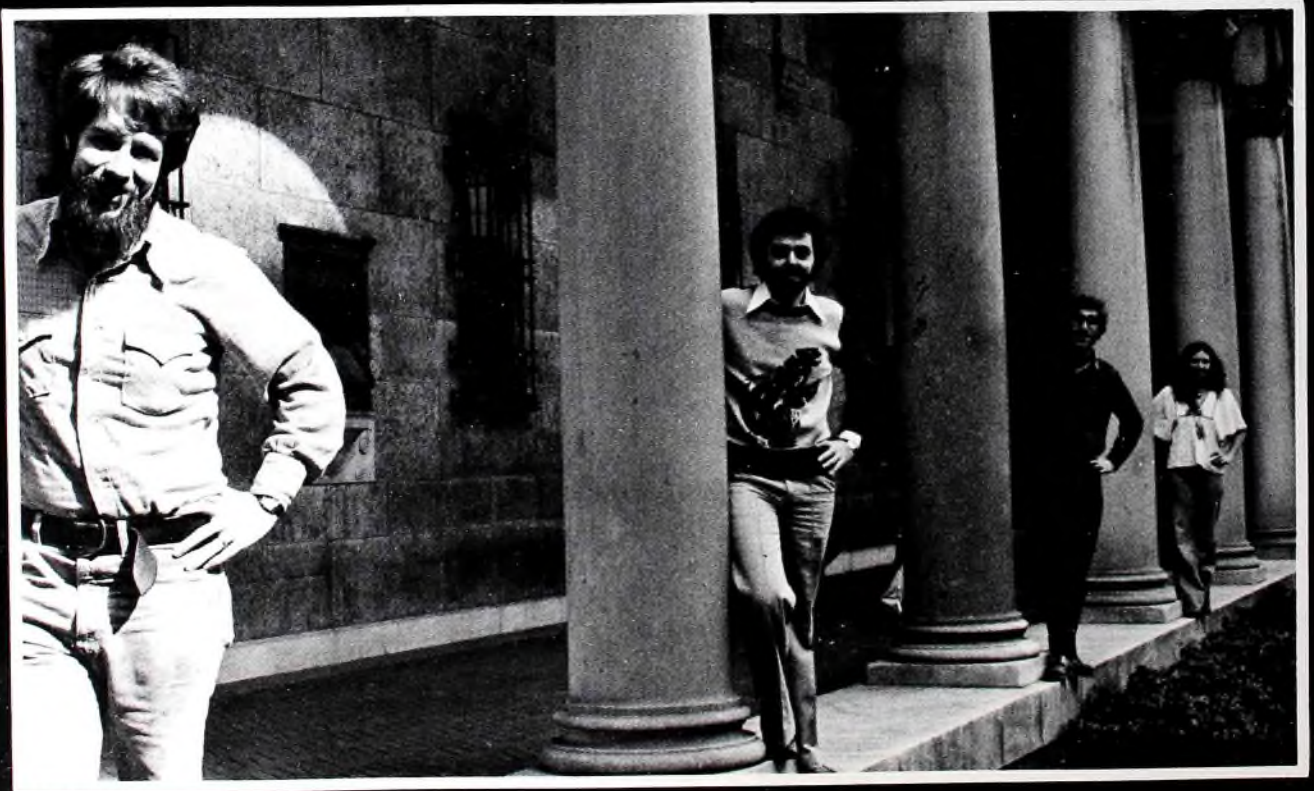

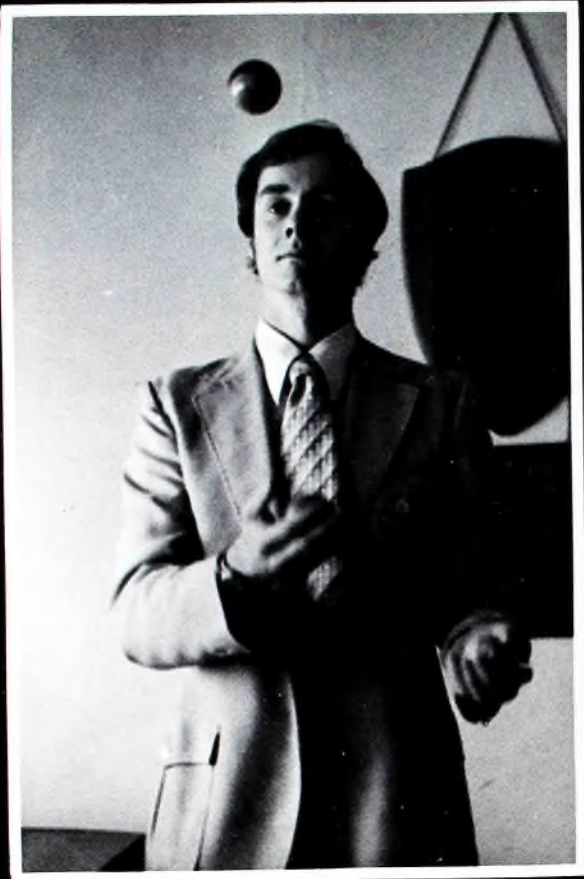

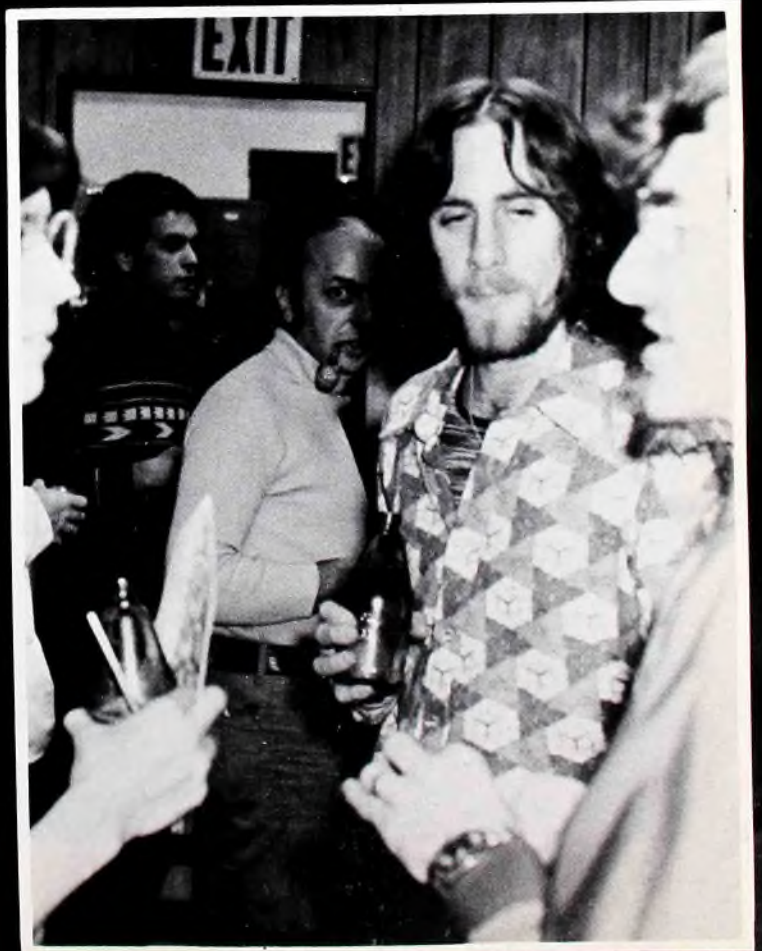

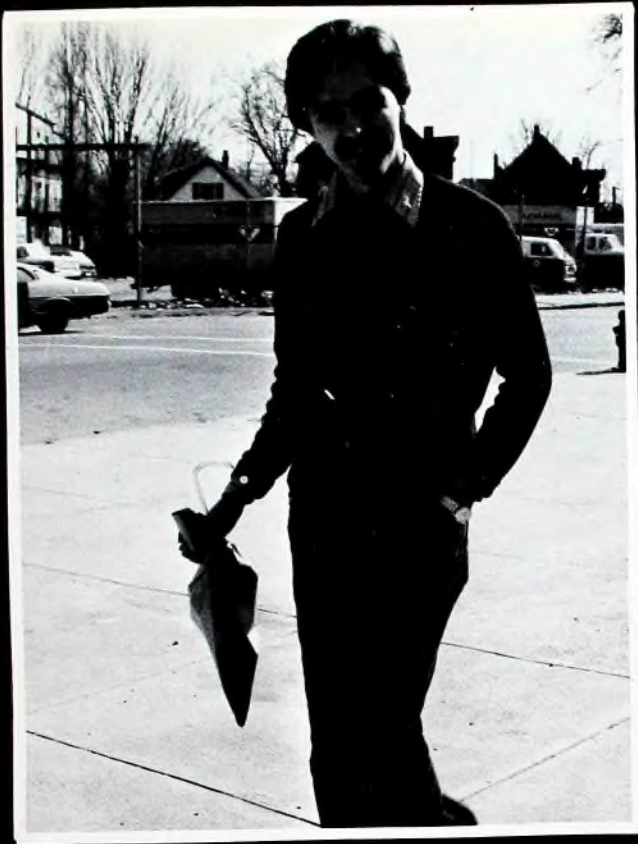

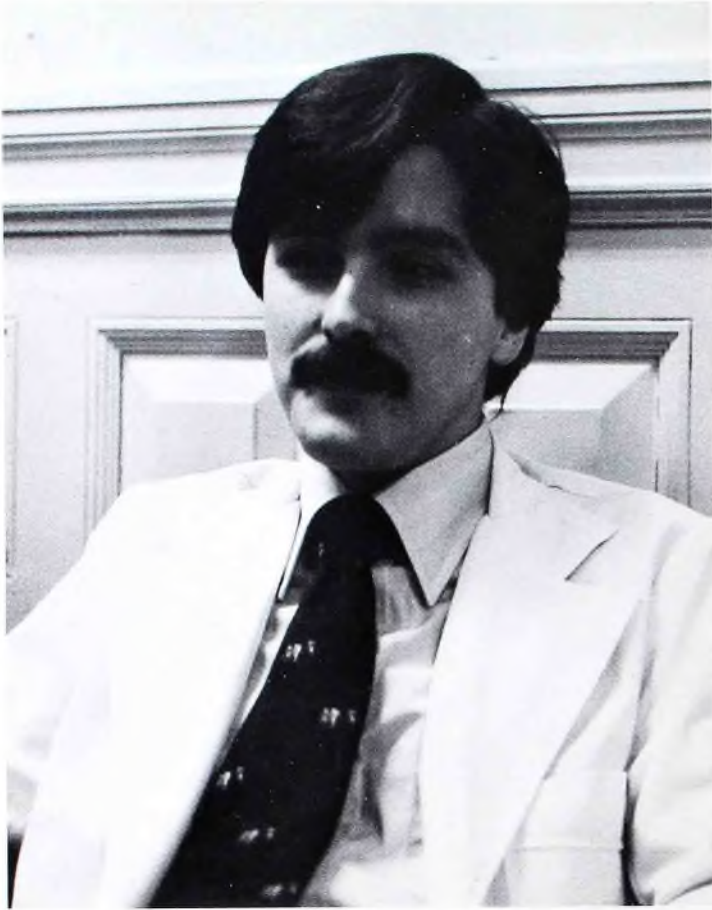

At last to be identified!
At last, the lamps upon thy side
The rest of life to see!

Congratulations, Doctor.

After four years of hard work, and one of the profession's finest technical educations, you're now a fully qualified optometrist. It's a fine profession and you can be justly proud of your accomplishment.

At Victory Optical, we're proud of our accomplishments in manufacturing ophthalmic frames. Proud enough to want you to see first hand our creative frame design and the modern manufacturing techniques we employ. The next time you plan to be in the New York Metropolitan area,

please let us know. We'd be delighted to show you through our plant.

In the meantime, we'd like you to have a copy of our latest frame catalog. It's chock full of the new zyl, metal, rimless and designer ophthalmic styles, plus a full selection of quality sunglasses that are sold only through professional offices. Just drop us a note and we'll put your copy in the mail.

Again, congratulations and best wishes for a long and successful career.

Anthony J. Bartolotta. President

 **Victory Optical**

WILL THEY FIT?

If they're Danker & Wohlk contact lenses, you can expect them to fit the first time your patient tries them on. And you can expect her to become a satisfied, adapted wearer in much less time.

Since they're made without junctures, on a parabola-like curve, Danker & Wohlk lenses naturally fit the human cornea better than spherically-generated lenses. They're fully finished, too, to eliminate the need for adjustments or refinishing.

No other contact lenses made are quite like Danker & Wohlk lenses.

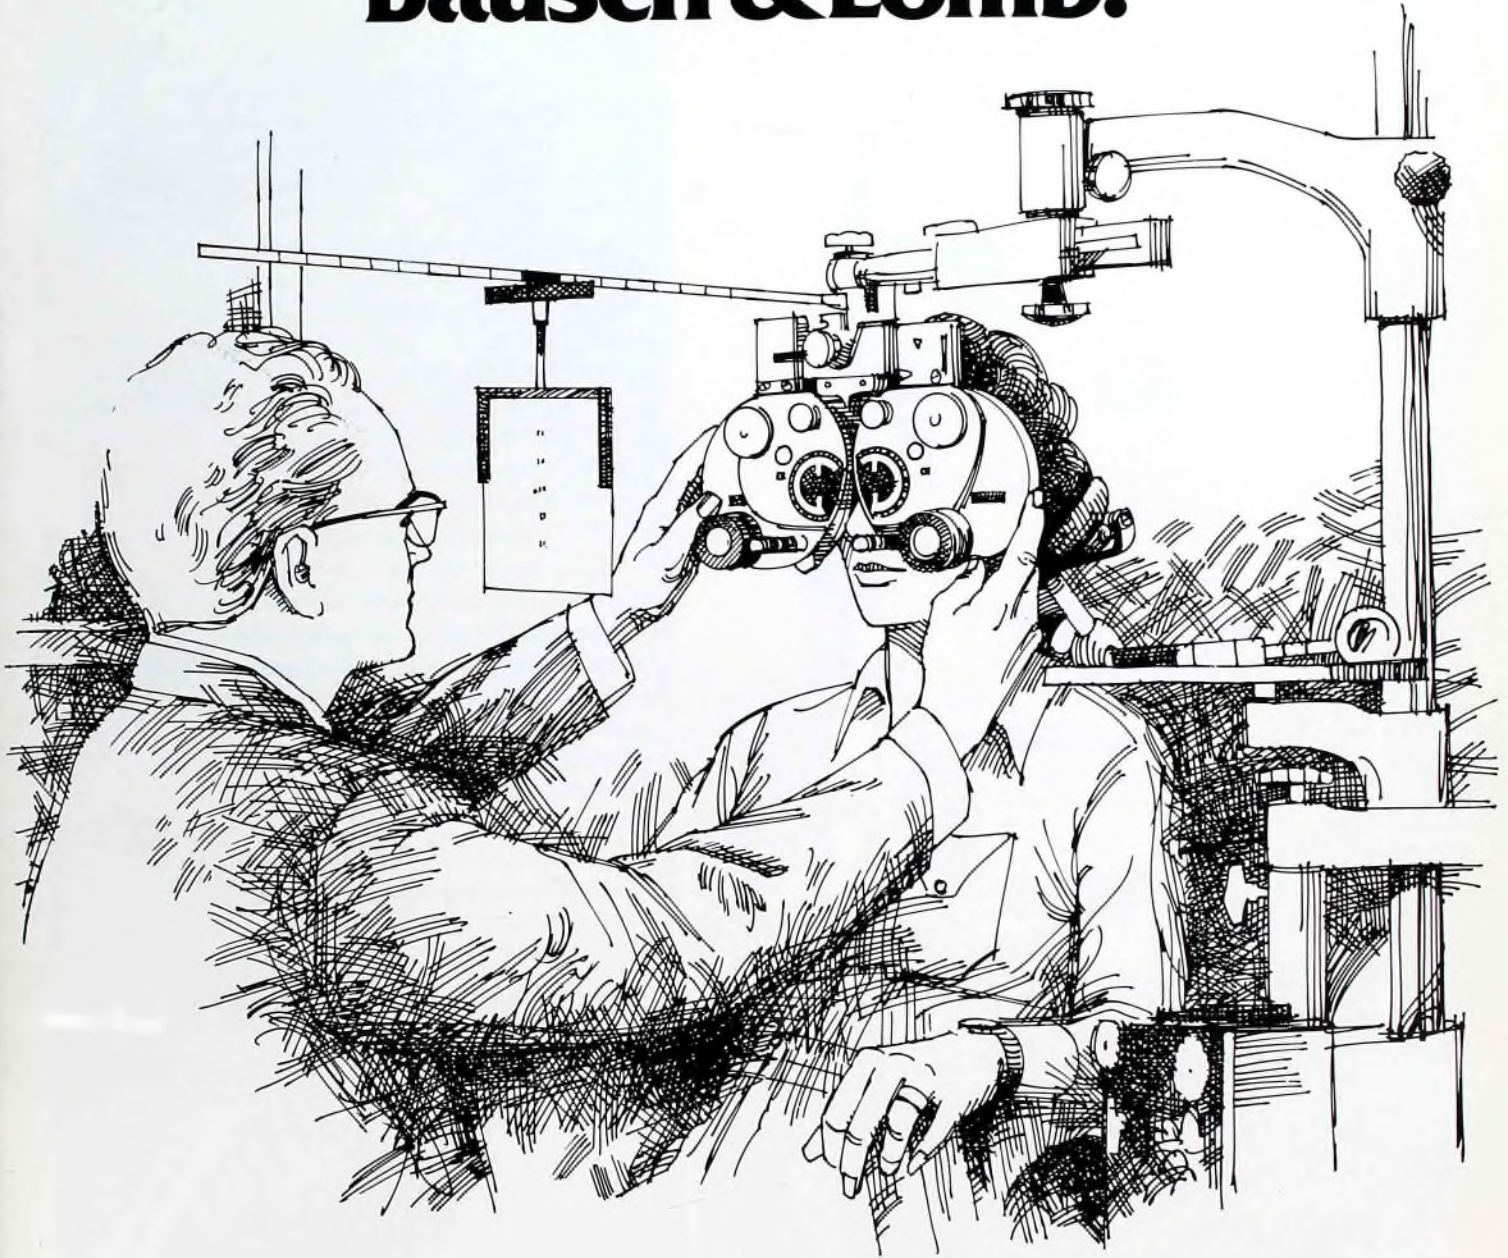

for contact lenses finished to perfection specify

Start out with a good name: Bausch & Lomb.

No one knows as much as you do about the trying years of hard work and study that go into becoming a professional — except us.

We at Bausch & Lomb have made it our business to know your business. The reason is simple — your livelihood is our livelihood. That's why we design every ophthalmic product and perform every service as if it were for ourselves. And, indirectly speaking, it is, because our success depends on your success.

So, as you commence your career and

begin selecting equipment, supplies, and services that will best meet your professional standards, start out with a good name — Bausch & Lomb. For decades B&L has been a familiar and respected name among professionals and patients alike. Use us as your one-stop source for ophthalmic instruments, frames, lenses, prescription laboratory services, and office planning assistance. If you do, you'll probably end up with the same good name you started with — and more.

BAUSCH & LOMB 
Mark of Leadership

Trio

Start your practice right with this trio of functional, attractive professional equipment designed by RELIANCE engineers to save you time and effort—and to make your patients more comfortable.

The 880 Fully Powered Chair/Table positions your patients precisely and easily at the touch of a button. Two chair base ranges are available: Low (880L) and High (880H).

The 7700 IC Instrument Stand offers elegant slim-line styling, and better patient accessibility. Three major instruments can be accommodated while instrument wells house three corded or rechargeable hand instruments of any make. A fourth hand instrument can be fitted to the console's binding post.

The 558 Saddle Seat Pedal Hydraulic Stool allows you to change your height, by means of a pedal, without procedural interruption. This deep cushioned stool features a patented 3-way support arm that serves as an abdominal, arm or back rest.

See your dealer and ask him for more information about the sensibly priced leader in functional highly styled equipment or write: F & F Koenigkramer, 96 Caldwell Drive, Cincinnati, Ohio 45216, Dept. 000.
